

REVCON

Owner's Manual

Dear Revcon Owner,

Your selection of a Revcon Motorhome is evidence that you are a special kind of motorist. You are undoubtedly familiar with many aspects of motorboming, as well as with the pleasure inherent in a recreation vehicle.

We believe, however, that only an intimate and, eventually, automatic command of your home on wheels will result in the kind of relaxed authority required to reinforce your enjoyment of the many benefits offered by Revcon.

This manual is therefore intended to acquaint you with proper operating and maintenance procedures. An examination of the pages that follow, will help assure safe, economical and efficient operation.

At Revcon, we test and evaluate each motorhome produced, continually looking for ways to make our product even better. Improvements, regardless of how large or how small, are incorporated into the Revcons currently in production. There is never a wait until next year's model. Consequently, this manual may not reflect all of the current features and improvements, but you can be sure that your Revcon will . . .

Note:

Because it is impractical to make frequent literature changes, specifications and equipment described in this manual must be subject to change without notice.
